SUMMARY

AI engineer who independently designs and ships production-style GenAI products end-to-end — from data model and backend through AI pipelines, frontend, and multi-cloud deployment. Solo-built and deployed four live AI products across ad-tech, business operations, ERP, and video, with recurring engineering themes: async LLM pipelines, access control enforced at the database layer, retrieval over live data, and tool-calling assistants that take real actions. A prior marketing career keeps the focus on the user and the business problem, not just the model.

TECHNICAL SKILLS

AI / LLM: OpenAI GPT-4o, Claude API (Anthropic), Gemini, LangChain, Prompt Engineering, RAG, Embeddings, Vector Databases (FAISS), Tool / Function Calling, Multi-provider LLM architecture, n8n

Backend: Python, Node.js, Express, FastAPI, TypeScript, REST APIs, Celery, BullMQ, Redis, JWT Auth, Prisma ORM

Frontend: Next.js 14, React 18, TypeScript, Tailwind CSS, Zustand, TanStack Query, NextAuth.js, Shadcn/UI, Remotion

Data / Infra: PostgreSQL (incl. Row-Level Security), Supabase, SQLite, Upstash Redis, Vercel, Railway, Render, GitHub CI/CD, Sentry

AI EXPERIENCE

AI Engineer • Independent AI Product Builder

Nov 2025 – Present

Bangalore (Remote) • Sole designer, engineer, and operator across four shipped GenAI products — full-stack, data model to deployment.

SELECTED AI PRODUCTS

AdPilot India — AI marketing SaaS for Indian SMBs • [Live](#) • [Code](#)

- Generates complete, platform-ready Google/Meta ad campaigns from a plain-language business description (Hindi / Hinglish / English) — shaped the prompting and orchestration to emit structured campaign objects rather than prose, so output drops straight into ad tooling.
- Built an async generation pipeline across 8 queues with automatic retry, atomic credit deduction, and non-blocking startup that survives cache outages — a slow model call never blocks a user or double-charges a credit.
- Modeled a 20+ table schema with integer-paise money handling and soft deletes, plus an India-context engine that shifts budget and strategy around festivals (Diwali, IPL, wedding season) and city tiers.

BOS SaaS — AI business operating system • [Live](#) • [Demo](#) • [Code](#)

- Full-stack operations platform (CRM, tasks, analytics, WhatsApp automation) fronted by an assistant that answers questions over live company data in plain English.
- Cut assistant latency from ~45s to ~4s by scoping retrieval to the caller's role and records instead of loading full context — the same access boundary (Admin / Manager / Staff) that keeps answers fast also keeps them authorized.

MillIOS — AI ERP for flour mills • [Live](#)

- End-to-end ERP — production, inventory, QC, dispatch, maintenance, audits, compliance — with a bilingual English/Hindi UI built for non-technical mill operators.
- Enforced 23-role permissions at the database layer via PostgreSQL Row-Level Security rather than app-side checks alone, and added a tool-calling assistant that reads and acts on live operational data.

ViralCut AI — AI video-editing SaaS • [Live](#)

- Turns raw footage plus a style description into an edited, auto-captioned short: the model plans the cut (scene selection, pacing, captions) and a deterministic pipeline renders it.
- Split the system into a FastAPI planning service, a Celery pipeline, and a Next.js + Remotion render worker so heavy processing (FFmpeg, scene detection) runs async without blocking the API.

AI Automation Engineer • CareerSathi Advisory (Freelance)

Dec 2025 – Mar 2026

Bhopal (Remote)

- Automated a consultancy's lead capture, qualification, and follow-up in n8n — replacing manual client outreach with an AI-driven nurture flow.

ADDITIONAL PROJECTS

Multi-PDF AI Knowledge Base — RAG question-answering over multiple PDFs: overlap-aware chunking, OpenAI embeddings, and FAISS retrieval through LangChain. Python • Streamlit • [Code](#)

Real Estate AI Chatbot — Lead-qualification bot that adapts its question flow (intent, budget, location, timeline) based on prior answers. Python • Streamlit • [Code](#)

AI ECOSYSTEM EXPOSURE

Fluent across the current AI stack — Claude, GPT-4o, and Gemini for building; Cursor, Copilot, and Windsurf for coding; rapid app builders (Lovable, Bolt); and generative-media / research tools (Runway, ElevenLabs, Suno, Perplexity, NotebookLM) — which keeps model and architecture choices pragmatic and current.

EARLIER EXPERIENCE

Digital Marketing Associate — Bhuwan Industries

Jan 2024 – Sep 2025

- Ran growth and paid acquisition (Instagram, YouTube, Google/Meta) and rapid-commerce listings (Blinkit) — direct, hands-on experience with the exact SMB advertising problem AdPilot India now automates.

Business Development Executive — Propedge Realty

Mar 2023 – Jul 2023

- Closed housing sales in Pune and generated leads via Housing.com, 99acres, and Meta ads — early grounding in what actually moves a customer to act.

E-Commerce Associate — ANS Commerce

Oct 2022 – Mar 2023

- Ran marketplace listings, competitor analysis, and account health across Amazon, Flipkart, and Myntra.

EDUCATION

BSc Mathematics — Barkatullah University, Bhopal

2015 – 2018
