

HIMANSHU PATEL

AI Engineer | LLM Applications, Agents & Retrieval Systems
Bangalore, India | +91 88275 04243 | himpat.271@gmail.com
linkedin.com/in/himanshu-patel-5195501a2 | github.com/WSupRaz | himanshu-portfolio-khaki.vercel.app

SUMMARY

AI engineer building production LLM applications end to end: retrieval over live business data, tool-calling agents, and async generation pipelines. Ship the full stack from PostgreSQL data model through FastAPI and Next.js to deployment. Three prior years in paid acquisition and e-commerce operations, so the products target measured SMB workflow problems rather than model demos.

TECHNICAL SKILLS

AI and LLM: LLM application development, RAG, embeddings, vector search (FAISS), tool calling, function calling, structured outputs, prompt engineering, agent orchestration, LLM evaluation, Claude API (Anthropic), OpenAI GPT-4o, Gemini, LangChain, n8n

Backend and Data: Python, FastAPI, Node.js, Express, TypeScript, REST APIs, Celery, BullMQ, Redis, JWT auth, Prisma ORM, PostgreSQL, Row-Level Security, Supabase, SQLite

Frontend and Infra: Next.js, React, Tailwind CSS, Zustand, TanStack Query, Vercel, Railway, Render, GitHub Actions, CI/CD, Sentry

EXPERIENCE

AI Engineer (Independent) | Self-directed product development, Remote

Nov 2025 - Present

- Design, build, deploy, and operate GenAI products end to end: data model, backend, LLM pipeline, frontend, production deployment.
- Recurring focus on async LLM pipelines, access control enforced at the database layer, retrieval scoped to live data, and tool-calling assistants that take real actions.

AI Automation Engineer (Freelance) | CareerSathi Advisory, Remote

Dec 2025 - Mar 2026

- Built an AI-driven lead capture, qualification, and nurture workflow in n8n over a pipeline of 200-300 leads, with automated WhatsApp follow-ups and per-lead custom messaging.
- Separated genuine prospects from cold ones automatically and cut the consulting team's manual follow-up time by roughly half, freeing them to focus on conversion instead of repetitive outreach. Ran concurrently with independent product work.

Digital Marketing Associate | Bhuwan Industries

Jan 2024 - Sep 2025

- Ran paid acquisition across Meta, Google, Instagram, and YouTube plus Blinkit rapid-commerce listings. Direct operator experience with the exact SMB advertising workflow AdPilot India automates.

Business Development Executive | Propedge Realty, Pune - residential sales, lead generation

Mar 2023 - Jul 2023

E-Commerce Associate | ANS Commerce - marketplace listings, account health (Amazon, Flipkart, Myntra) Oct 2022 - Mar 2023

SELECTED PROJECTS

AdPilot India - AI ad campaign generator for Indian SMBs | adpilot-india.vercel.app | github.com/WSupRaz

- Live product with 20 active users. Generates platform-ready Google and Meta campaigns from a plain-language business description in Hindi, Hinglish, or English.
- Constrained model output to structured campaign objects rather than prose, so generated campaigns import directly into ad tooling without manual rework.
- Async generation pipeline across 8 queues with automatic retry and atomic credit deduction, so a slow model call never blocks a request or double-charges a credit.
- 20+ table PostgreSQL schema with integer-paise money handling; India-specific budget logic for festival periods (Diwali, IPL, wedding season) and city tiers.

BOS SaaS - AI business operating system | bos-saas-ai-web.vercel.app | demo video on request

- Live product with 8 active users. Assistant answering plain-English questions over live company data (CRM, tasks, analytics) via tool calling against the production database.
- Cut response time from ~45s to ~4s by scoping retrieval to the caller role and record set instead of loading full context.
- Enforced Admin, Manager, and Staff boundaries at the database layer, so the scoping that makes answers fast also makes them authorized.

Additional builds

- MilIOS - AI ERP for flour mills.** Built to a working mill operator's requirements and in use by them; live at millos-kappa.vercel.app. Production, inventory, QC, dispatch, and compliance modules with a bilingual English/Hindi UI. Enforced 23-role permissions via PostgreSQL Row-Level Security at the database layer, plus a tool-calling assistant over live operational data.
- ViralCut AI - AI video editing SaaS.** Live at viralcut-ai-rose.vercel.app for short-form clips. Model plans the edit (scene selection, pacing, captions); a FastAPI planning service, Celery pipeline, and Next.js/Remotion worker render it, keeping FFmpeg off the request path.

EDUCATION AND EXAMINATIONS

Civil Services Examination (UPSC) | Full-time preparation

2018 - 2022

- Cleared the Preliminary and Main examinations and reached the Interview (Personality Test) stage, the final round of a three-stage national examination with an annual applicant pool of roughly one million.

BSc Mathematics | Barkatullah University, Bhopal

2015 - 2018
